Encrypted Email
Overcoming eDiscovery + Compliance Challenges

bluesource

The need to send and receive secure messages creates new challenges for eDiscovery and compliance. Kiteworks sends an unencrypted copy of encrypted emails to a secure archive for full eDiscovery functionality.

Bluesource combines the technology of Kiteworks and Arctera (formerly Veritas) eDiscovery and Enterprise Vault with our expert service to overcome the challenges associated with encrypted email.

Ensure communications are archived for eDiscovery, while maintaining compliance with FINRA, SEC, GDPR, HIPAA, and other regulations.

Encrypted Email Workflow

Message is composed via Outlook or Kiteworks

↓

Files and email body are encrypted by Kiteworks

↓

Notification email sent to the recipient(s)

A copy of the entire message is sent via TLS to Enterprise Vault

↓

Message is indexed, classified, and archived with a retention policy

↓

Message body, attachments, and metadata are available for eDiscovery
