EDB Migrations
Migrate Exchange Databases

bluesource

Exchange database files (.edb) store mailbox data from Microsoft Exchange. The Bluesource migration team can efficiently and quickly move out of EDBs to third-party archive solutions.

Migration Speed
4 TB/day

Why Migrate Exchange Databases?

An organization has lots of legacy Exchange journal mailboxes with historical data that needs to be archived.

Exchange journal data needs to migrate to an archiving solution such as Enterprise Vault, Mimecast, Arctera Insight, or ProofPoint for retention, compliance, and eDiscovery purposes.

Process EDBs Directly

Bluesource can process EDBs without the need to mount files in Exchange or fully recover them.

Increase Efficiency

Exchange can only mount one recovery database at a time, making direct processing more efficient and timely.

Security and Recovery

EDBs are securely moved, allowing organizations to reenable best practices.
